IDC4251C Module 5 Project Part 1

This is part 1 of the project for Module 5. There is no Canvas submission, all submissions will be made to your GitHub Classroom repository after accepting the invitation.
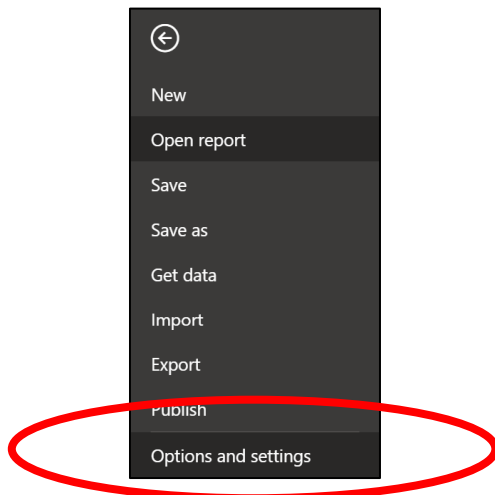

This assignment is a sub-project which uses a starter Power BI workbook file to practice with DAX. The starter file "revenue-cost.pbix" and data files "Calculated-Columns-Revenue.csv" and "Calculated-Columns-Units.csv" can be found in the GitHub Classroom repository.

The project begins with "Creating a Table with the CALENDAR Function" (Video 5.22) and ends with "Understanding Relationship Functions" (Video 5.26).
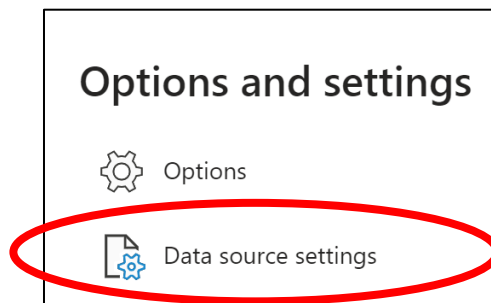

Push your completed workbook to the repo.

NOTE: Before starting the project you will need to change the data source location based on where you store your .csv files as shown in the following steps in the starter workbook:
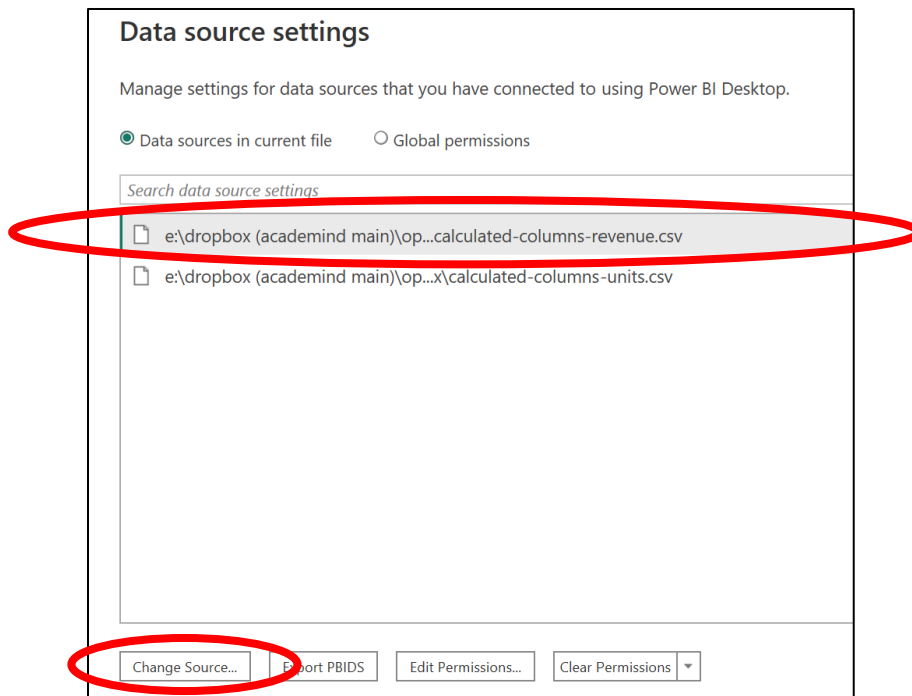

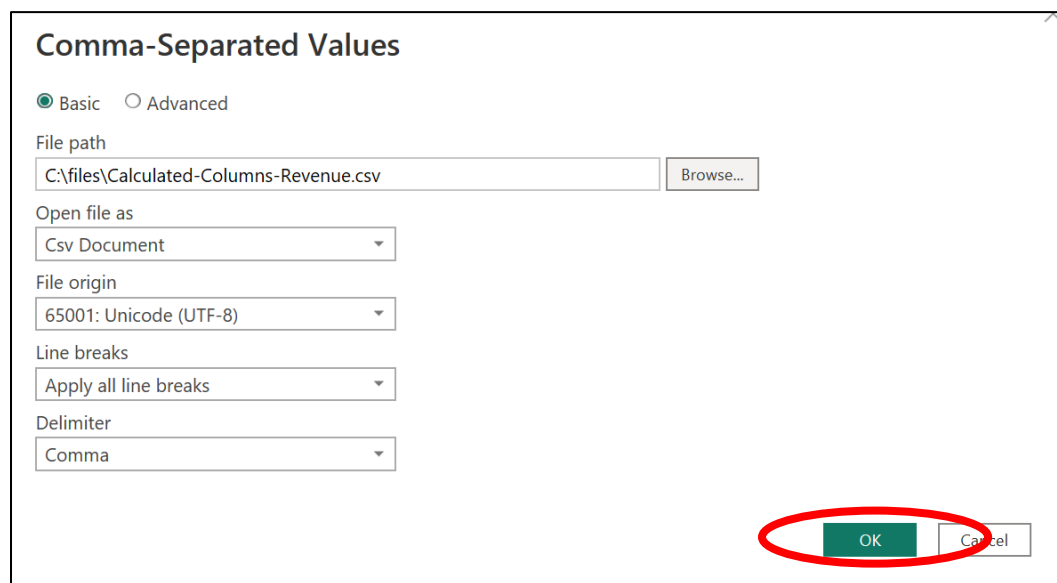

Go to File/Options and Settings

Select Data Source Settings

Select the first file and then press "Change Source"

Browse for the location of your file, open the file, then select OK. Repeat this process for the second file.

Select Apply Changes
